Aquascapes • Paludariums • Terrariums
Biotopes • Ponds • Waterfalls • Natural Swimming Pools

DEXTER ROSS | FOUNDER & AQUASCAPE ARTIST

THE IDEA

More than an aquarium.

At Dexter's Aqua Designs, we create natural environments that bring the beauty, movement and balance of nature into homes, offices, hospitality spaces and outdoor landscapes. We combine plants, water, rock, wood and biological processes to create living systems that are designed to evolve over time.

NATURAL

Inspired by real habitats and natural forms.

CUSTOM

Designed around your space and your vision.

LIVING

Built to develop, mature and change over time.

PALUDARIUMS

Where land meets water.

A paludarium combines aquatic and terrestrial environments in one living display. We create rainforest-inspired scenes with rocks, wood, moss, ferns, tropical plants, streams, waterfalls and aquatic life.

A miniature ecosystem — designed to feel like a real piece of nature.

PLANTED AQUARIUMS

Underwater landscapes.

Natural rock formations, driftwood, aquatic plants, substrate, lighting, filtration and carefully selected aquatic life are composed into a balanced underwater landscape.

We design the aquarium as a landscape — not simply as a tank.

From miniature worlds to large natural landscapes.

TERRARIUMS

Miniature forests in glass using moss, ferns, tropical plants, stone and wood.

BIOTOPE AQUARIUMS

Habitats inspired by specific natural environments and their relationships.

SELF-SUSTAINING PONDS

Aquatic plants, biological filtration, rocks, gravel, circulation and compatible life.

WATERFALLS & STREAMS

Natural-looking water movement integrated with rock, planting and landscape.

NATURAL SWIMMING POOLS

Swimming and regeneration zones connected through biological filtration and planting.

HOW IT WORKS

Nature, engineered to work together.

WATER

Movement, circulation, oxygenation and filtration.

PLANTS

Growth, nutrient uptake, habitat and visual structure.

MICROORGANISMS

Biological processes that help break down organic matter.

ROCK & WOOD

Structure, shelter and natural visual formations.

AQUATIC LIFE

Fish, shrimp, snails and other compatible organisms.

LIGHT

Supports plant growth and shapes the visual atmosphere.

Self-sustaining does not mean maintenance-free. The aim is to design systems that work with natural biological processes and

OUR PROCESS

From idea to living ecosystem.

01 CONSULT

Space, vision, lifestyle and budget.

02 STUDY

Light, water, access, surroundings and practical requirements.

03 DESIGN

Layout, materials, planting, circulation and ecosystem concept.

04 BUILD

Construction and installation of the living landscape.

05 ESTABLISH

Cycling and biological development before final stocking.

06 GUIDE

Handover, care guidance and long-term support.

LET'S CREATE

YOUR OWN PIECE OF NATURE.
